

Simulation Evaluative Tool

Name: Cindy Campbell

Date: 1/22/13

*This reflection paper is due within (1) one week of your simulation experience. When the simulation instructor receives this essay your clinical instructor will receive a "S" or satisfactory for your simulation participation. If this essay is not received within (1) week you will not receive a "S" or satisfactory for the day.*

How will you implement or utilize the strategies you have learned today in your clinical simulation experience: I will implement the strategies learned

in simulation to help me enhance care given to the geriatric client.

Reflective Debriefing: *Please take a moment to think or reflect of objectives you feel you learned or achieved today. Please be specific and write your thoughts about this experience:*

Through simulation and instructor guidance I learned how to further the client interview by adapting the tools used, such as the SPICES, ADL's, and Pittsburgh Sleep Quality Assessments. These tools enabled me to individualize care and to better understand the client. I also gained a better understanding of how to write and develop a Nursing Care Plan.

Specify areas for practice to expand your learning, improve performance, and confidence in the clinical area.

I will strive to become proficient in all areas of the client interview. I feel in order to accomplish proficiency I will need to practice asking pertinent questions, and recognizing the cues that would lead me to further assessments. I will need to practice writing an effective care plan

State your plan to improve your clinical performance and confidence: use the back of this sheet or additional paper:

In an effort to improve my clinical performance

I will conduct assessments on both well and ill clients. I will also practice interviewing with friends and family. I will practice writing care plans using patient scenarios given in the textbook. I believe that with practice in the areas specified above I will improve my clinical performance thereby increasing my confidence.
